MicroBatch Scale

MICROBATCH SCALE

The Brabender MicroBatch Scale utilizes a low capacity precision load cell for automatic gain-in-weight batching of small dry ingredient batches.

The central unit in the station is a weighed bowl. When the batch is completely dispensed by the feeder into the bowl, it tilts over and discharges its contents. The 360 degree turn and the semi-spherical shape ensure complete discharge without residue, even when particularly poor flowing ingredients are batched.
