

Quadro[®] Sifter

HIGH CAPACITY SIFTER

HIGH CAPACITY, SAFETY SCREENING, AND DELUMPING TECHNOLOGY

- effectively segregates and retains impurities and other foreign materials
- positive, 360° discharge

INCREASED SAFETY

- pre-screens material before entering downstream equipment
- reduces risk of contamination of final processed product
- prevents damage to equipment and injury to personnel caused by foreign material

SANITARY

- quick screen changes
- easy-to-clean design
- stainless steel design

COMPACT

- low profile design fits below most bulk bag unloader and mixer discharges

PROVEN TECHNOLOGY

- rotating screen technology
- based on the Quadro[®] Comil[®] platform
- low maintenance, noise and dust
- no vibration

QUADRO® SIFTER

QUADRO'S APPROACH

The infeed product falls into the sifting chamber. The material is then forced to the sifter surface by centrifugal acceleration ensuring continuous flow of material through the screen openings. The finished product is then discharged 360° around the screen and screen bottom to enhance product flow. Impurities and other foreign materials collected in the screening chamber can be suctioned off away by an optional vacuum take-off.

COMPACT, INLINE DESIGN

- Ideal for process integration
- Can be moved in and out of line with minimal effort

SIFTER TOOLING

- Quick screen maintenance
- User friendly design

SANITARY, STAINLESS STEEL DESIGN

- Easy-to-clean
- Minimal number of parts
- Suitable for vacuum discharge

TRY BEFORE YOU BUY

Determine the exact savings and improvements to your process with free product testing at our R&D Test Centre, or by trying a rental Sifter in your plant. Quadro offers complete engineering/design services to accommodate variable process conditions or requirements.
