

Small batch sieving with the Russell Mini Sifter™

This simple and easy to use sieve removes contamination from your powders. It improves the quality of your final products and safeguards your reputation.

The Mini Sifter is perfect for sieving small batches of products in all industries eg bakeries, laboratories, start up companies and pilot plants.

Improves your product quality

- Improves the quality of your products - just fit a mesh size suitable for your powder and it will remove any oversized contamination.

Easy to strip down & clean

- Simply unlock two clamps to release the product contact parts that can be cleaned in less than 5 minutes. This eliminates the risk of cross contamination between batches.

Compact and portable

- Can be simply transported for use in different areas by one person.

Very quiet operation

- Typically less than 65 dBA

How the Mini Sifter works

A motor vibrates the unit and particles smaller than the mesh size pass through the apertures while larger particles stay on top. The 'straight through design' allows for higher throughputs. Designed so bags of powder can be simply emptied into it. The Mini Sifter® is constructed in stainless steel and FDA approved materials

Options

An oversize outlet can be fitted to the deck to continuously remove contamination. Explosion proof motors are also available to safeguard the safety of your operators.

Russell have been setting worldwide standards for quality, performance and reliability for over 70 years. We understand the needs of our customers in a wide range of industries, including the laws and regulations that govern you – our machines are designed and built to exceed them.
