

The Compact Screener

High capacity check screening-wet or dry applications

The range of **Compact Screeners** is ideal for high capacity safety screening of powders and liquid slurries, especially where space is restricted. You can be assured that all oversized contamination is removed from your product giving you total peace of mind. Operation and cleaning are quick and easy making these machines perfect for all processing industries.

Improves your product purity

Eliminates any oversized contamination from your powders and liquids.

Increases your production

Doubles your throughput with half the size - Much higher throughputs per unit mesh area compared to conventional machines.

Reduces your down-time

Easy to strip down and clean without tools.

Eliminates dust and fumes

Enclosed screening for total containment.

Lowers noise levels

Solid rubber suspension gives quieter operation - typically as low as 70 dBA.

Fits into smaller spaces

Fits easily into existing installations and areas of limited headroom.

Typical Capacities

| Material | Model | Mesh Size (microns) | Capacity |
|------------------------|-------|---------------------|-------------|
| Tungsten Carbide | C600 | 100/v | 100 kg/h |
| Toner Powder | C900 | 75/v | 300 kg/h |
| Stainless Steel Powder | C900 | 42/v | 100 kg/h |
| Salt | C900 | 2000 | 7,000 kg/h |
| Powder Paint | C900 | 100/v | 750 kg/h |
| Pharmaceutical Powders | C600 | 630 | 1,000 kg/h |
| Leaded Glaze | C1200 | 112 | 8,000 kg/h |
| Food Ingredients | C600 | 900 | 1,000 kg/h |
| Flour | C1200 | 800/v | 50,000 kg/h |
| Clay Slip | C900 | 63 | 5,500 l/h |
| China Clay | C1200 | 53 | 20,000 l/h |

Compact 900 screeners with Vibrasonic debinding system at Colmans - mustard powder producer. The screens are fed from blenders and pass the sieved material through to the packaging area.

Full research and testing facilities

All our separation equipment is available for extended trials on your premises, while facilities for testing under controlled conditions are provided by state-of-the-art Test and Research Units. These units are located at our sites in the UK, Belgium and the USA. Among other things, we evaluate the effects of changing variables such as mesh size, motor speed, degree of vibration and rate of material flow. These can all influence the performance of separation equipment. The results of every test are added to a computerized database, which incorporates information gathered by the company since its earliest days. We offer customers confidentiality in regard to specific findings.

Full after market support

We are committed to giving our customers a fast, responsive and reliable support service that helps to keep production lines running. This means full support from our technical representatives and the availability of a complete range of spares off-the-shelf. Russell standard parts represent excellent value for money and allow units to operate trouble-free at optimum levels of performance. For mesh assemblies, made to order or standard lines, we have our own production facilities, which ensures rapid delivery and extremely competitive pricing.

Call us today to find out how the Compact Screener will help solve your processing problems and transform productivity. All our experience is at your disposal.

Compact Screening

Simple and effective performance

The design of the **Compact Screener** is based on simplicity, the material being screened passes through the machine in a straight line, ensuring no hold-ups or dead points. Any oversized material quickly travels across the screen mesh to give maximum separation and can be discharged through an oversize outlet if fitted. Cleaning and maintenance of the machine is extremely easy as all of the contact parts can be removed in a matter of seconds without the need for tools.

Compact design

The Compact Screener fits neatly into production lines, providing considerable screening capacity without requiring excessive headroom. Its innovative design means that the screener is less than half the height of a traditional sieving machine.

Russell Compact Screeners

Maximum capacity, Minimum headroom, Total control

Meeting industry needs

At **Russell Finex** we are committed to working closely with customers around the world, supplying solutions to your problems and keeping up to date with changes in legislation that affect your industry.

We will help you select the right machine with complete peace of mind, right from our pre-purchase testing facilities to our after market support.

Over the last 70 years we have solved the screening problems of almost every large manufacturing company in the world. We often provide custom solutions, re-designing or modifying the standard range of Compact Sieves at our own manufacturing facilities. Compact Screeners are available in a range of different diameters and with many different options to meet

the specific demands of your particular industry including: **different materials of construction, different grades of finish, explosion-proof motors, debinding systems and many more.**

Compact Sieves are suitable for screening wet materials as shown here at Royal Crown Derby.

We also understand the importance of post purchase support and pride ourselves on the quality of our after market service. This ensures your Compact Screener is always performing to the best of its ability.

Compact Screeners can be fitted with a variety of options

Russell 3 in 1 Screener

Designed for easy bag-emptying and check screening of raw materials, where operator protection is essential and product quality must be beyond criticism.

- Bag emptying station at operator friendly height with dust hood to remove airborne particles.
- Compact Sieve to remove oversize contamination.
- Magnetic trap to catch ferrous particles smaller than the mesh size.

Russell Airswept Sieve

The patented Airswept Sieve is a system which can be installed for pneumatically conveying air in one dust-tight operation.

- Sieving rates are vastly improved.
- Loading is automatic via a suction wand from either a hopper, bag or bulk storage location.
- Completely enclosed system gives improved containment of your product.

The Russell Compact Screener is available in a choice of different finishes to meet your individual needs.

Nylon Coated

Bead Blasted

Brush Polished

Mirror Polished

The Russell Vibrasonic® 2000 Mesh Deblinding System

The Russell Vibrasonic Deblinding System can be combined with the Compact Screener to eliminate mesh blinding and increase throughput. The Vibrasonic system applies an ultrasonic frequency directly to the sieve mesh. This breaks down the surface tension, effectively making the wires friction-free. Without surface tension there is no mesh blinding, giving increased throughput and consistent product quality.

- Longer mesh life since there is no harsh abrasive mechanical action on the mesh to impair tension and cause wear.
- Reduces cleaning frequency as mesh remains cleaner and unblocked longer.
- No need for scrapers, brushes or rubber balls, therefore you eliminate the contamination caused when they wear out.
- Explosion-proof/flame-proof systems available, including ATEX approval for Europe.

Russell Self Loading Sieve

The Self Loading Compact 600 is a complete stand-alone system which loads, screens and discharges your material in one easy operation.

- Material is drawn into the screener via vacuum.
- The air is separated from the material via a filter integrally mounted in the lid of the Self Loading Sieve. The vacuum is created by an electric pump (exhauster).
- The timer controls switch off the vacuum, the material is sieved and drops into a container / mixer bowl.
- The cycle then begins again.
